now i think it's a great game and i hope u can finish it and post it. email me at: A: All your lines are one-character too long, most of them are null in the middle and the nulls cause the crash. For example, take this line: `var currentLine = textField.text; if (currentLine.length == 1) { currentLine = "0" + currentLine; } This compiles to if (currentLine.length == 1) { currentLine = "0" + currentLine; } Note the extra '0' at the end. When you debug the code, just paste in the single character version and see if it runs! [Isolated carcinoma of the pancreatic head with biliary and duodenal invasions]. Isolated head of pancreas neoplasms are rarely noticed as they usually give rise to more widespread metastases. A male patient aged 68 with an acute-onset abdominal pain with a weight loss, a anorexia and an edema of the hands and feet was operated. At an early postoperative period an acute pancreatitis led to the proximal jejunal resection. The patient underwent a Whipple procedure. The pathohistological study led to the diagnosis of an isolated carcinoma of the head of pancreas. The immunohistological study showed a positive PSA and a negative cytoplasmatic CEA expression. Despite of a remarkable metastases in right adrenal gland, spleen, pericard, liver and lymph nodes, all the other localizations are not detectable by endoscopic study, CT and by ultrasonographic examination. The T-scan allows to detect the presence of pancreatic neoplasm in the beginning. Although the pancreatic neoplasm is not so frequent, the possibility of an isolated carcinoma of the head of pancreas and its poor prognosis, make this pathology different from the usual carcinoma of the pancreas, the treatment remains the same: to remove the head of pancreas. I want to combine them, so that there are two 16 bit outputs, one for each channel, but I can't seem to find a way to do that. There is a pin on the 16 that I think is used for PWM, and one of the channels only uses half of the range. A: You will need to use one of the 16 bit A/D converters. I have used the SN74LVC1G16, which has 16 bits of resolution, 12 bits of internal D/A conversion and an internal DAC. These are very high resolution devices and have no problem converting a 20Hz PWM signal. Alternatively, look at the LM741, which has a similar interface to the SN74LVC1G16 and with 16 bits of resolution. A: If your CPU provides more than one 16 bit output, you can use a 32 bit A/D-converter. Alternatively you can use the STM8SV controller, which can also read in a 16 bit fast and convert it to 32 bit. I found only one small document about this controller. Q: SQL Server stored proc query runs in the console but does not run from SSDT I have created a stored proc that returns a single row and is a call to another DB. The stored proc code is as follows: ALTER PROCEDURE [dbo].[sp_user_count] @username VARCHAR(20) AS SELECT count(*) AS [User Count] FROM [Db1].[dbo].[tblUser] WHERE [User] LIKE @username + '%' when the stored proc is called from SQL Server Management Studio it returns the correct result but when it's called from SSDT it just returns the row count to
